Wireless tethering, automatic imports, external storage with SanDisk iXpand, desktopclass workspace customisation and more available now in Cascable 4.0 — the class-leading photography toolkit app for over 170 WiFi-enabled cameras

STOCKHOLM — May 28th, 2019 — Cascable AB is happy to announce the release of Cascable 4.0, the largest single update in the app's history.

Cascable 4.0 brings a completely revamped set of workflow tools, including greatly improved wireless tethering for cameras that support it and a significantly more customisable and flexible workspace than before. Additionally, Cascable can make use of external USB storage with SanDisk iXpand, making handing off images to a client a snap. Cascable 4.0 also introduces support for working with IPTC ratings, as well as Storage Links for automatically importing images from a connected camera.

Cascable is available to get started with for free from the iOS App Store. Cascable's Pro features come with a free trial when subscribing from \$2 per month, or can be unlocked with a one-time \$29.99 purchase. Please visit <u>http://cascable.se</u> for more information on Cascable, including screenshots, photographs, and detailed user guides.
